

Subdomain Database Coverage Expands from 2.3B to 9.6B Subdomains

Posted on May 6, 2025

In line with our commitment to continuous improvement, we recently expanded the data coverage of [Subdomains Database Download](#) from an average of 2.3 billion to more than 9.6 billion subdomain records, as seen in our latest [weekly full files](#). This coverage enhancement is a direct result of techniques employed to optimize data processing and storage efficiency, with our development team focusing on improving data indexing and retrieval, as well as enhancing resolving processes—overall enabling faster lookups and more accurate results for our database.

With these new enhancements, Subdomain Database Download users can now enjoy:

- **Superior visibility:** With the number of subdomain records in weekly full files increasing by approximately 317%, users gain more comprehensive visibility, allowing them to uncover more assets and potential threats.
- **Improved reliability:** Enhancements to resolving processes help ensure a consistent and dependable access to the most current subdomain data, even as the dataset size has more than quadrupled.
