Upgraded Web Interfaces for All Lookup Tools

Posted on May 13, 2025

We're excited to introduce upgraded web tool interfaces with enhanced data access across all our lookup tools. The improved GUIs are designed to make your lookup reports richer and simpler to use for investigations and testing, improving how technical and nontechnical users access and utilize domain, DNS, IP, and other cyber data accessible through this complete list of our lookup tools.

Here are the new features available to all logged-in users with credits.

- **Unmasked results:** You can now access the full depth and breadth of data you're accustomed to receiving from our API calls, directly within the user-friendly lookup GUIs. This means richer insights, more comprehensive investigations, and faster decision-making, all without needing to write or execute a single line of code.

chatgpt4.shop	updated	openchatgpt.net	updated

- **Shareable full results:** The unmasked lookup result can be made visible to anyone, even without them registering, simply by toggling the "Visible for all" option and sharing the report link.

- **Lookup memory:** The lookup GUIs now remember your past queries, allowing you to revisit previous investigations and track changes over time. Quickly compare results from different dates to identify trends, monitor domain evolution, and gain deeper contextual understanding.

- **No more throttling:** We have removed the previous throttling limits so you can conduct investigations at the speed you need, as your available credits allow.

The credits can be purchased by clicking the "Buy more credits to unlock" button on the lookup report page or by visiting our Pricing page.

With these upgrades to our web tools, WhoisXML API users can now:

- **Access cyber intelligence more easily:** Users benefit from improved access to comprehensive domain data within the GUIs, as the unmasked results now provide the same value as a corresponding API response.

- **Implement a more efficient workflow:** Security investigations and testing are now streamlined with the combination of user-friendly GUIs and powerful data access.

- **Conduct faster investigations:** The ability to conduct more lookups quickly and access richer data speeds up investigations for everyone, regardless of their technical expertise. In addition, security professionals can clearly visualize and share the lookup results, enabling better communication and teamwork.

Feel free to contact us for more information about this upgrade and how you can use it for your specific needs. You can also check this list of all our lookup tools.
